

## Mission Statement

VA is relaunching VA.gov as a user-centered, modern web property designed to put the needs of Veterans first.

Launch Date: November 7, 2018

Remaining Business Days: 9

**Ensuring security around logging out, and providing a way to post alerts and stories to the Homepage are the remaining highest priority elements.**

**Progress:** have a potential workaround solution for destroying the cookie upon logout, but need to validate that it's stable enough to launch to production. Alerts and stories are dependent upon the static content repository being complete, and that happened today 10/25, so should be quick to get the MVP out from here.

**Constraints:** hard to test with MVI data and environments, especially with a complex piece of functionality like SSO. Risk around how much time it may take to test and debug to get to a state of high confidence.

**Next Steps:** continue Go / No Go meetings and continue exploring possible solutions to the logout problem, and possible alternatives to the original SSO launch plan.

## Key requests

- Email contact information for Launch Day partners to Rachael

## Progress

- Vets.gov banner with blog post live
- Content repository separate and connected to preview.va.gov
- Successful NSOC/ITOPS on-site, and traffic pointed 99% at new servers
- Search V2 up in staging, no need for MOU
- Help desk phone number schema decided
- 2/3 steps complete for cookie destruction upon logout
- Pentest complete, no major vulnerabilities

## Burndown

**8 Technical** issues complete (^ 4)

**37 Content** issues complete (^ 9)

**86 Front End** issues complete (^ 38)

**17 Accessibility** issues complete (^ 2)

**4 Back End** issues complete (^ 2)

**51 Bug** issues complete (^ 18)

**6 Design** issues complete (^ 3)
